

Ecovector Consulting

Helping implement sustainable energy in transport

The transport sector is undergoing rapid change

Public and private sector organisations the world over are having to face changes in the transport sector – for example:-

- Responding to the challenge of climate change in which transport plays a major role
- Developing new directions for transport technologies due to concerns over security of energy supply
- Seeking economic development opportunities from the low carbon energy economy

Sustainable transport is key

Sustainable transport is the key to responding to these changes. But finding solutions that conserve resources, protect the local and global environment, provide the mobility desired by people and businesses and maintain or enhance quality of life is not easy.

Ecovector Consulting is ideally placed to provide strategy and technical advice to support sustainable transport implementation. We offer a co-ordinated approach to:

- Government departments and national energy agencies to develop suitable transport policies and programmes to meet international and national obligations on climate change
- Local authorities and regional government to develop and implement sustainable transport strategies
- Private sector companies to develop and exploit new commercial opportunities in transport technologies

Our experience and skills

Our staff have over 30 years of international research and consultancy work in transport within the public and private sectors. Our skills and knowledge in sustainable transport development and energy policy analysis help clients through our expertise in:

- Energy strategy and policy development for efficient and sustainable transport
- Technical and economic analysis of clean, alternative transport fuels, including biofuels and electric vehicles
- Monitoring and evaluation of environmental and energy strategies
- Environmental policy design and implementation in the transport sector
- EC project management, proposal design and consortium building and project review.

Previous clients include: UK Government Departments, the European Commission, UN Food and Agriculture Organisation, Energy Saving Trust, East of England Development Agency, Envirolink Northwest, CENEX.
